Product Description

High Purity Peptide 99% Oxytocin Acetate Lyophilized Powdercas 50-56-6

Oxytocin is a neuropeptide hormone that is produced in the hypothalamus and released by the posterior pituitary gland. It plays a crucial role in various physiological processes and is often referred to as the "love hormone" or "cuddle hormone" due to its involvement in social bonding and attachment.

Oxytocin acts as a neurotransmitter and hormone in the body, exerting its effects by binding to specific receptors in different tissues. In reproductive functions, oxytocin is responsible for stimulating uterine contractions during childbirth and promoting the ejection of milk during breastfeeding.

Beyond its reproductive functions, oxytocin also influences social behavior and emotional responses. It is involved in promoting trust, empathy, and bonding between individuals. Oxytocin is released during positive social interactions, such as hugging, kissing, or engaging in intimate relationships, and contributes to feelings of closeness and attachment.
