Our Product Introduction

### 4-Amino-3, 5-Dichloroacetophenone High Purity Factory Source 37148-48-4

4-Amino-3,5-dichloroacetophenone is an organic compound with the chemical formula C8H6Cl2NO. It is a derivative of acetophenone, where the hydrogen atom at the 4-position is replaced by an amino group (NH2), and chlorine atoms are present at the 3- and 5-positions of the phenyl ring.

This compound is commonly used as an intermediate or building block in organic synthesis. Its unique structure and reactivity make it useful in the preparation of various pharmaceuticals, agrochemicals, and other fine chemicals.

4-Amino-3,5-dichloroacetophenone can undergo various chemical transformations, such as substitution reactions, condensations, and cyclizations. These reactions allow for the introduction of different functional groups or modifications to the molecule, leading to the synthesis of more complex organic compounds.

As of my knowledge cutoff in September 2021, 4-Amino-3,5-dichloroacetophenone has been utilized in the development of certain pharmaceuticals and research chemicals. However, please note that there may have been further advancements or applications related to this compound since then.
