Product Description

Supply CAS 444731-52-6 Pazopanib White Powder Scientific reagent

Pazopanib is an oral medication that belongs to a class of drugs known as tyrosine kinase inhibitors. It is primarily used in the treatment of certain types of cancer, including advanced renal cell carcinoma (kidney cancer), soft tissue sarcoma, and advanced ovarian cancer.

Pazopanib works by inhibiting the activity of specific proteins called tyrosine kinases, which play a crucial role in the growth and spread of cancer cells. By blocking these proteins, pazopanib helps to slow down or stop the growth of tumors.

Patients typically take pazopanib once a day, with or without food. The exact dosage and duration of treatment may vary depending on the specific type and stage of cancer being treated, as well as individual patient factors.

Like any medication, pazopanib can cause side effects. Common side effects may include fatigue, diarrhea, high blood pressure, nausea, vomiting, and loss of appetite. It is important for patients to discuss any side effects or concerns with their healthcare provider.
