

Vitamin A CAS 68-26-8 Feed Grade Va1 Va2 Vitamin A Acetate Powder

Our Product Introduction

Basic Information

- Place of Origin: Hebei, China
- Brand Name: Xinzhou
- Certification: COA, GMP, CQC, SGS
- Model Number: 68-26-8
- Minimum Order Quantity: 100g
- Price: Discuss in detail
- Packaging Details: 1kg/bag
- Delivery Time: within 3 days
- Payment Terms: T/T, Western Union, MoneyGram, telegraphic transfer and bitcoin
- Supply Ability: 500kg/week

TOPESENCE

Product Specification

- Cas No.: 68-26-8
- Product Name: All-trans-Retinol
- MF: C₂₀H₃₀O
- Purity: 99%
- Grade Standard: Medicine Grade
- Other Names: Vitamin A1 Alcohol; Vitamin A1 Alcohol, All-trans-; Vitamin A1, All-trans-; vitamin A1 alcohol; vitamin A1 alcohol, alltrans; Vitamin A; Vitamin A (all-trans-Retinol); VITAMIN-A-ALCOHOL SOLUTION, IN HEXANE (0.25 MG/ML), 1X2 ML
- Sample: Available
- Highlight: **CAS 68-26-8 Vitamin A, Feed Grade Vitamin A Acetate Powder, Va1 Organic Intermediates**

Product Description

Medicine Grade all-trans-Retinol Vitamin A1 alcohol CAS NO.68-26-8 With Safe Delivery

Description:

Vitamin A, light yellow flake crystals, melting point 62-64°C, boiling point 120-125°C (0.667Pa). Easily soluble in grease or organic solvents, but insoluble in water. It has good thermal stability, relatively stable under alkaline conditions, and unstable under acidic conditions. It shows a characteristic blue reaction when encountering , and is easily damaged by ultraviolet rays and oxygen in the air. It can be protected when it coexists with vitamin C.

Function:

Vitamin A includes A1 and A2, and A1 is retinol. Vitamin A2 is 3-dehydroepianthol, and its physiological activity is 40% of that of vitamin A1. Vitamin A can promote growth and reproduction, maintain the normal secretion of bone, epithelial tissue, vision and mucous epithelium and other physiological functions. Vitamin A and its analogues can prevent precancerous lesions. In the absence of it, growth retardation and dark adaptability decrease, resulting in night blindness. Dry eye disease occurs due to the dryness, desquamation, hyperkeratosis and decreased lacrimal gland secretion of epithelial cells of epidermis and mucosa. The cornea in severe cases is softened, perforated and blind. The epithelial cells of respiratory tract keratinized and lost cilia, which made the resistance reduced and easy to infect. Foods with more vitamin A include liver, egg yolk and milk powder of poultry and livestock. Carotene can be changed into vitamin A in intestinal mucosa, red yellow and dark green vegetables, and fruits contain more carotene.

Product Name	all-trans-Retinol
Melting Point	61-63 °C(lit.)
refractive index	1.641
pka	14.09±0.10(Predicted)
Shelf Life	24 months when properly stored
Storage	Keep in a cool, dry, dark location
