## Product Description

### Cosmetic Peptide Nicotinamide Mononucleotide CAS 1094-61-7 Anti-Aging

#### character

The appearance of  $\beta$ -nicotinamide mononucleotide is white to yellowish, is a crystalline powder, and has no obvious odor.

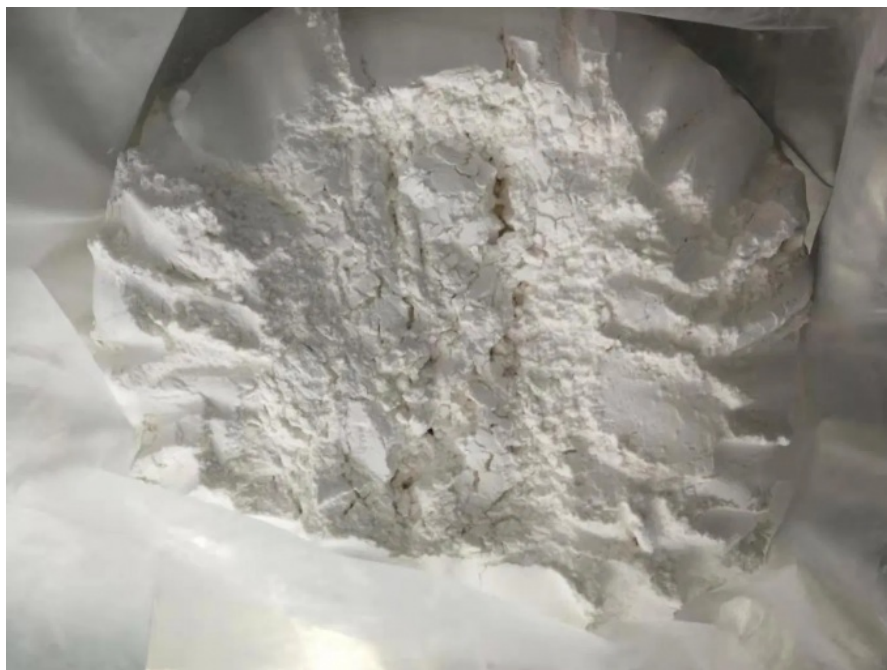

#### intro

Nicotinamide mononucleotide, also known as  $\beta$ -nicotinamide mononucleotide (NMN), is a synthetic substrate for Coenzyme I, and NMN is also used in anti-aging research. Studies have shown that  $\beta$ -NMN can also regulate the secretion of insulin and affect the expression level of mRNA.  $\beta$ -NMN has a wide application prospect in the field of medical treatment.  $\beta$ -nicotinamide mononucleotide is a product of extracellular nicotinamide phosphoribosyl transferase (eNAMPT) reactions and a key NAD<sup>+</sup> intermediate. It improves glucose tolerance by restoring NAD<sup>+</sup> levels in HFD-induced T2D mice. It also enhances liver insulin sensitivity and restores gene expression associated with oxidative stress, inflammatory response, and circadian rhythms, in part through SIRT1 activation.
