Express delivery	EMS,UPS,FedEx,DHL,TNT

USES:Epitalon is a synthetic peptide made of four amino acids (alanine, glutamic acid, aspartic acid, and glycine), that is based on a natural peptide called epithalamin extracted from the pineal gland. It was synthesized by Vladimir Khavinson, a Russian professor and gerontologist, whose research focused on the development of peptide preparations used to restore function in various organs in order to prevent and reverse the aging process. He is currently the Director of the Saint Petersburg Institute of Bioregulation and Gerontology.
