Product Description

Export Only Orlistat CAS-96829-58-2 99% Purity Beauty Body Raw Materials

Orlistat is a long-acting and potent specific gastrointestinal lipase inhibitor, white or white powder at room temperature, insoluble in water, soluble in chloroform, soluble in ethanol, and inactivated by covalent bonding with active serine sites of gastric lipase and pancreatic lipase in the stomach and small intestine. Fat in food can not be broken down into free fatty acids and monacylglycerol, so fat can not be absorbed and utilized, thereby reducing the body's calorie intake and controlling weight. The drug does not need to be absorbed throughout the body to work. At the usual dose, fat absorption can be inhibited by 30%. It is rarely absorbed after oral administration, and can be metabolically inactivated in the intestine, the metabolic site is in the gastrointestinal wall, and the elimination half-life is about 14 to 19 hours. About 97% of this product is excreted in the stool, of which 83% is excreted in its original form. Orlistat can be used clinically for obesity and hyperlipidemia.
