Description

Liraglutide is a new type of hypoglycemic drug that activates AMP-activated protein kinase thus enhancing insulin sensitivity. It not only has a significant hypoglycemic effect, but also has the functions of weight loss, blood pressure reduction, and improvement of blood lipid profile. Liraglutide, a human glucagon-like peptide-1 (GLP-1) receptor agonist, slows gastric emptying, increases satiety, and reduces patient eating, while reducing the brain's desire to eat and allowing the body to increased energy expenditure plays a role in weight loss; it prevents the liver from producing too much glucose and promotes the pancreas to produce more insulin to lower blood sugar; in addition, liraglutide also has cardiovascular benefits and kidney protection.
